**Subject:** NWIRP/NG data inquiry.

Hi Mike

I have asked DEC about the status of the data inquiry that you made yesterday (as an fyi, I was not on the address list for your email).

Late last year DEC had indicated that they would get raw, validated data out within 75 days of collection, so hopefully they have not missed that target. DEC does not release unvalidated data; EPA quality assurance folks impose the same policy for data that we collect. Perhaps at the next meeting we can discuss whether unvalidated data can be shared in certain situations and with certain conditions about use of the data prior to validation.

I do understand that you have had to deal with an inordinate amount of headaches as a result of Site related groundwater issues and pace in which they are being addressed. I too look forward to the upcoming meeting and am hopeful that by having all parties at the table we can make some substantive progress over the next few meetings. I agree with you that the continued operation of Plant 6 -2 is very important and would like to learn more about the status of the Navy/BWD pilot proposal. I will follow up with Richard Mach and Lora Fly about the status. Last week, on the chance they had not yet been informed, I let them know that BWD intended to shut 6-2 down in the fall for 2 years worth of upgrades and that you also intended to move outside the plume over the longer term. If you have any information you would like to share about your discussions on the pilot please feel free to share them with me and the DEC folks; it seems to me we should find a way to make sure that the pilot occurs and that progress towards reaching an agreement needs to happen soon.

Regards

Doug
